Portfolio: dombash.github.io

GitHub: github.com/DomBash

Software engineer with 4+ years of experience building full-stack applications, cloud-based data pipelines, and scalable software for commercial products and scientific research.

Experience

Cooperative Institute for Research in Environmental Science (CIRES)

Data Analyst/Engineer | June 2025 - Present

- Developed and maintained software, data ingestion pipelines, and cloud-based workflows supporting NOAA's acoustic data processing initiatives.
- Modernized scientific software ecosystems, including contributions to the echopop and echopype Python packages, improving functionality and compatibility.
- Designed cloud databases and ETL workflows connecting production and analytical systems.
- Standardized data workflows and resolved production software issues with cross-functional teams.

Journyx

Full Stack Engineer | July 2024 - June 2025

- Designed and implemented scalable full-stack solutions for web and mobile platforms, improving system performance and user experience.
- Developed cross-platform mobile applications using Flutter for iOS and Android, reducing development time by approximately 40%.
- Built backend features and database integrations for enterprise time-tracking applications.

L3 Software Support Engineer | July 2022 - July 2024

- Investigated and resolved complex software defects across backend services, databases, and web applications.
- Built Python-based data pipelines to process and transform large datasets, ensuring data quality and accessibility for analytics.

Technical Skills

Languages: Python, C#, JavaScript, C++, SQL

Backend/Data: REST APIs, PostgreSQL, ETL, Firebase, Google Cloud

Cloud/DevOps: AWS, Docker, GitHub Actions, Git, Bitbucket

Education

B.A., Computer Science - University of Colorado, Boulder
